

In a Nutshell

Adeya's mobile security solution Mobile Trust is the only to combine strong voice encryption, data and device protection, and malware defence.

Adeya's customers benefit from a world-class mobile security solution. Its intrinsic safety and high usability render it unique.

Adeya's solution allows voice encryption and secure data transmission/storage, for all mobile smartphone brands. It is highly scalable, proposes transparent security and seamless adoption.

Usability

- All major smartphone brands are supported
- Scalable back-end for wide-scope deployments
- Better quality than standard GSM
- Seamless to deploy, to manage and to use
- Interconnection with your phone/data network

Security *

- Encrypted calls
- Encrypted conference calls
- Encrypted emails
- Encrypted SMS
- Encrypted calendar and contacts
- Smart malware defence
- Smartphone firewall
- Encrypted information storage
- Secure online backup and restore
- Remote data deletion

* Availability of Mobile-Trust features depends on the mobile platform

Adeya Mobile Trust
The world's only integrated mobile security solution

Extend the privacy of the network to your mobile devices

Adeya's Mobile Trust provides confidence to your mobile world: crossing borders, using foreign carriers, being exposed to device theft or to coercion, countering eavesdroppers, defending against malware – the list of challenges is endless. Adeya's solution solves them for you, seamlessly!

The wide use and increasing capabilities of smartphones introduce security risks that exceed those of laptop computers. Mobile devices are becoming a major target for eavesdroppers and computer criminals. Lost, stolen, compromised devices and eavesdropped communications endanger confidential data, compliance efforts and reputations.

Adeya licenses its mobile security solutions, seamlessly integrated on all widely used mobile devices and architectures (BlackBerry®, Symbian®, Windows Mobile®, Android®, etc.). Customers secure their smartphone transmissions and devices, while enjoying an unprecedented level of user-friendliness. Its solutions comprise multi-platform client-side software and a scalable back-end for wide-range deployments.

Traditional mobile security solutions are in no way comparable to that of Adeya, since they comprise only few parts of the security offering – Adeya covers transmissions security, local data security and malware protection. They are not meant for wide-range deployments, whereas Adeya's Mobile Trust includes a uniquely scalable back-end.

About Adeya

Adeya is the leading Swiss provider of mobile phone security and mobile voice encryption. Adeya's founders have introduced information risk management services to Swiss banks in 1999, and have audited over 150 high-security governmental and banking networks.

Today, Adeya solutions are routinely used by governments, corporations and senior-level officials and executives in Switzerland and abroad. Adeya is a privately-held company with headquarters in Geneva, Switzerland.
